Abstract This research's working group consists of 30 faculty members achieved according to willingness and having experience of teaching within Mehmet Akif Ersoy University Faculties of Education, Science and Literature, Veterinary. As a part of study, acquired qualitative data tested with descriptive analysis method with content analysis. Themes, to reach general view, were given under for each discourse question after controlling and becoming definite. For testing data, frequency and percentage statistical technics were used. It is given direct take of attendee views.
According to findings, butterfly effect is seen in education organizations and a small failure in education process is effective to make up a bigger failure. Based upon research results, butterfly effect showing rewarding signals should be taken into consideration to get early solutions for probable problems. Disorder formed by chaos in education should be used as chance for a new order and adaptation. Chaos theory is a must to apply in education systems with its reflections.

Keywords Chaos, Chaos Theory, Chaos In Social Sciences, Chaos and Education.
